Hi, Jeff,

Here are a couple short, easy-to-work-up, yet potent articles for the ZX81. The first, by Greg Harder, is especially neat. Some time back, a reader (don't remember who for sure) suggested that we publish a routine like this. I put the "bug" in Greg's ear, and here several months later, is the result. Incidentally, Greg's address (for payment) is:

Gregory C. Harder
PO Box 6493
Denver, CO 80206

Want a bio on him? He's a geologist whose work takes him all over the country for weeks at a time. When he does make it back, he ends up with plenty of time to devote to his favourite computers, i.e. the ZX81 and TS1500. He's written some very significant software for these machines, some of which we've published in previous issues.

The other thing is yet-another-Fred-hack. I kept it short and sweet, so that it stands a chance. I'm including the Hot Z listing of the COPY routine disassembly, but you don't have to publish it if you don't have the space.

The enclosed tape and notes on the draft copies should make everything clear as day. (Famous last words, eh?)

Have you had a chance to play with my beta copy of the modem program? Any suggestions, ideas, bugs, etc.? I'm holding off on the rewrite until I hear back from you.

Regards,

Fred
